

Syed Haamid Ali

haamidali619@gmail.com | linkedin.com/in/haamidali619 | github.com/haamid619 | Bengaluru, India

EDUCATION

HKBK College of Engineering

Bengaluru, India

B.E. in Electronics and Communication Engineering

SKILLS

Programming: Python, SQL, C++, R

AI / Machine Learning: Machine Learning, LLM, Computer Vision, Feature Engineering, Data Preprocessing, Model Evaluation

LLM / Automation: Prompt Engineering, RAG, Voice Agents, Claude, Groq API, n8n, REST APIs, Webhooks

Cloud / MLOps: Azure Services, Docker, MySQL, MLOps Pipelines, Git, GitHub, Linux (Ubuntu)

Libraries / Tools: OpenCV, NumPy, Pandas, NLTK, spaCy, Scikit-learn, XGBoost

PROJECTS

House Price Prediction | *Machine Learning, Regression, Data Science*

- Built an end-to-end house price prediction pipeline using Linear, Ridge, and Lasso Regression models on the California Housing dataset to analyze and predict residential property values.
- Conducted exploratory data analysis (EDA), feature engineering, correlation analysis, cross-validation, and comparative model evaluation using RMSE and R2 Score to identify the best-performing regression model.
- Developed a reproducible machine learning workflow with Python and Scikit-learn, incorporating data preprocessing, model training, hyperparameter tuning, and performance analysis following industry-standard ML practices.

Spam Message Classifier | *Machine Learning, NLP, Text Classification*

- Built an end-to-end NLP-based spam classification system using the SMS Spam Collection dataset of 5,572 labeled messages to classify text as Spam or Ham.
- Applied TF-IDF vectorization with a 3,000-feature limit and trained a Multinomial Naive Bayes classifier using Scikit-learn, achieving 97.4% accuracy on an 80/20 train-test split.
- Evaluated classification performance using Precision, Recall, Accuracy, Classification Report, and Confusion Matrix, achieving 100% spam precision and 81% spam recall, with interactive predictions for new messages.

Smart Inventory Management using Computer Vision | *CV, ML, Predictive Analytics*

- Built a mobile inventory monitoring solution using computer vision to identify products, detect stock shortages, and estimate quantities in real time.
- Applied predictive analytics to forecast replenishment requirements and automate purchase order recommendations based on consumption trends.
- Designed a scalable AI-driven architecture suitable for warehouses, retail stores, and hospitality environments, significantly reducing manual overhead.

AI-Powered Resume & Interview Coach | *LLM, NLP, Speech Analysis*

- Built an intelligent career assistant that analyzes resumes against job descriptions and provides personalized, actionable recommendations for improvement.
- Developed a mock interview platform leveraging speech analysis and computer vision to deliver real-time feedback on communication and presentation.
- Designed a personalized interview preparation pipeline that dynamically generates interview questions and improvement plans tailored to the candidate's profile.
